as an over the road truckdriver i really appreciate being able to find the safest and fastest way to avoid traffic and weather delays in my route and xm radio gives me the opportunity to do this long before i get into local markets and backups, also helps getting this info without having to listen to hour after hour of useless commercials just to get a mention of weather and traffic conditions in the area or find out the station doesn't even cover them. Satellite radio has become a great safety benefit to the trucking industry by setting radio and taking distractions away from having to hunt this info
